# Winter Energy Challenge

Winter is just around the corner and with our recent history of unpredictable winter weather, we need to start getting prepared now! Here are some of the basics we need to be getting right:

Keep heating set at 21°C, higher temperatures will prompt customers and colleagues to open windows when they become too uncomfortable - *the most common waste of energy!*

Avoid opening windows when the heating is on

Try to avoid supplementary heating / cooling unless essential

Dress appropriately for the weather / temperature

Don't allow furniture to block radiators

Let the sunshine in, open drapes / blinds and let the sun heat your building for free. Get them all closed when its cold to help insulate

Report faults and get them fixed as soon as you can

If you have any winter energy saving ideas please send them to: [sustainability@glasgowlife.org.uk](mailto:sustainability@glasgowlife.org.uk) and we will share them with your colleagues across Glasgow Life
